

Uniting Top-down and Bottom-up Systems on Clean Unit System Platform (CUSP) Based upon P-140PCT

Akira Ishibashi

Research Institute for Electronic Science
Hokkaido University, Hokkaido 060-0812, Japan

Where do we find the most striking "confrontation"?

1. P-140PCT Background

Invention of Transistor (1947)
Bardeen, Shockley, Brattain

Kilby's Patent (1958)
Had become Platform for IC, LSI, & VLSI

Blooming Nano-Science & Technologies
(2000~)

Top-down Systems

Bottom-up Systems

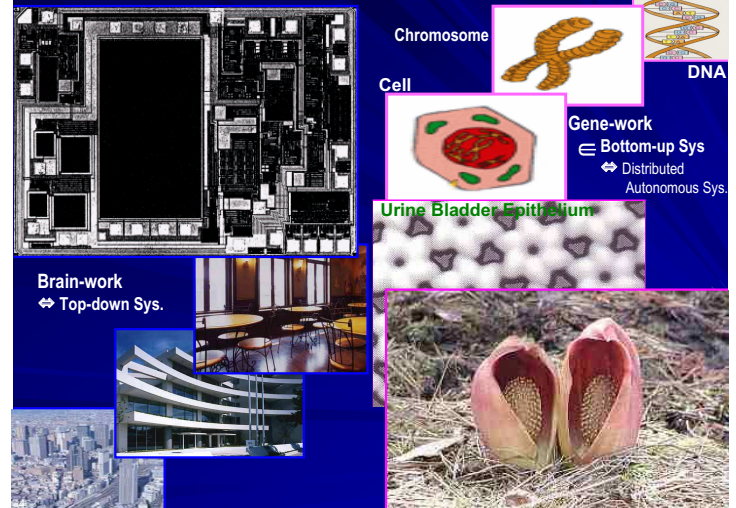

P-140PCT (2004)

for uniting Top-down & Bottom-up Systems, E_g-MRS, and CUSP

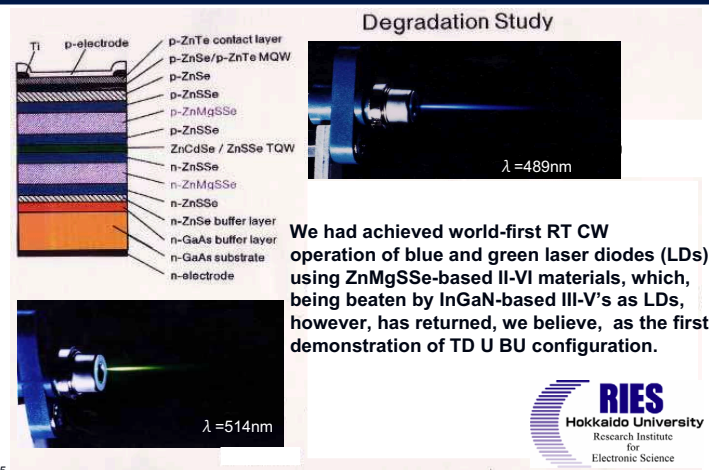

3 Phase-separated, so far.

Top-down and Bottom-up Systems

Degradation analysis of II-VI LD inspiring uniting bottom-up structures and top-down systems

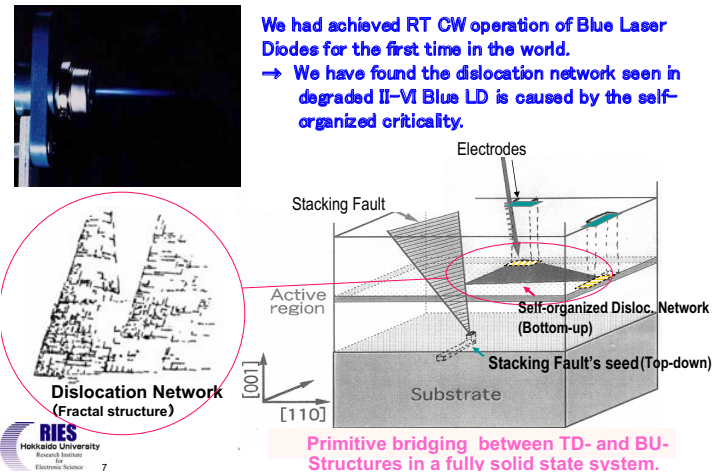

Number and Size of V-shaped Dislocation Structures

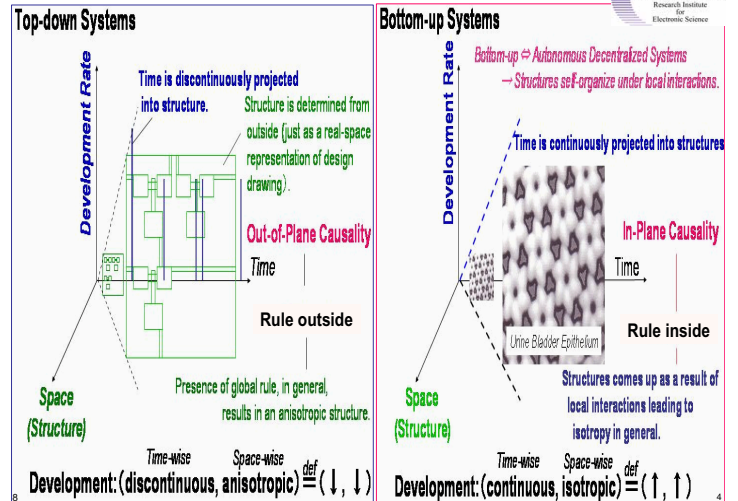

Power law holds for number vs. size, indicating that degradation is one of self-organized critical phenomena.

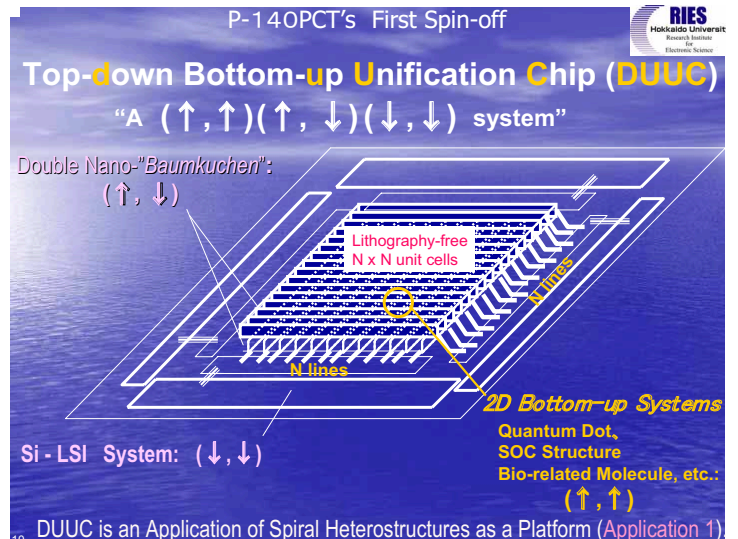

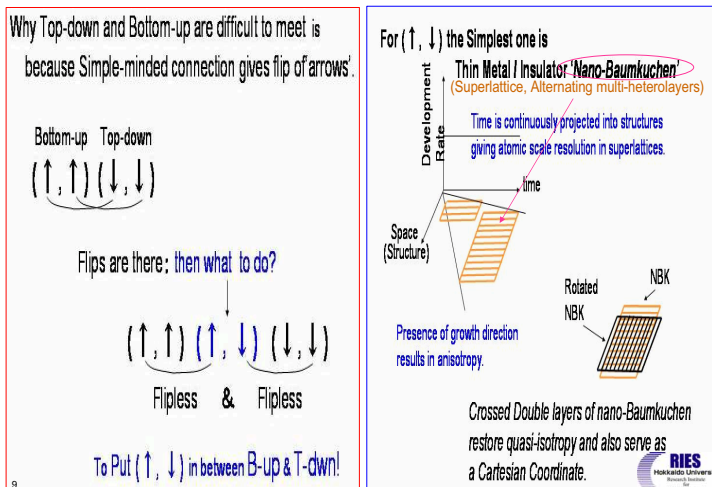

Primitive Achievement of TD & BU in fully solid state manner.
A. Ishibashi and K. Kondo, *Electron. Lett.*, 40 1268 (2004)

P-140PCT is based upon the insight...

Use of the third structure (\uparrow, \downarrow) to unite TD- with BU-systems

P-140PCT's 2nd Spin-off
Quantum Cross (Q-Cross) for Electronic Devices

Spiral Heterostructures

for Optical Devices, especially the photovoltaic devices

13

Further, to utilize the whole spectrum of the Sun,
proposed is a new structure ...

14

...Eg-Maximally Reconfigured Solar-cell (Eg-MRS) !

Eg-MRS can provide us with a high energy conversion efficiency

15

For TD U BU Processing, Cleanroom (CR) is needed, but

16

P-140PCT's 4th Spin-off: Clean Unit System Platform (CUSP)

Thrust to unite TD- w/ BU-systems urges us to topologically transform Cleanroom.

17

CUSP provides us with ultimate cleanliness of ISO class -1,
which is four orders of magnitude better than that in super cleanroom.

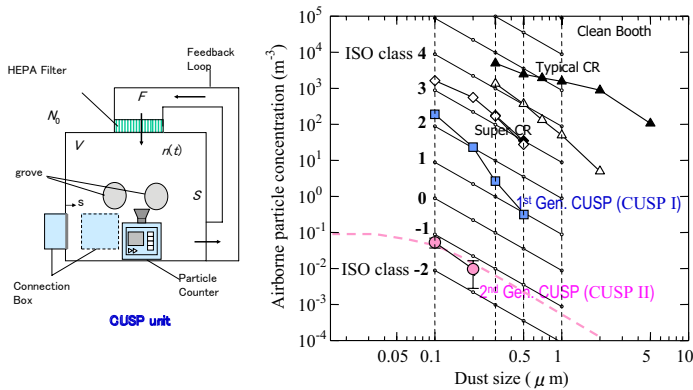

CUSP II

CUSP to enable us to make DUUC, Q-Cross, and Eg-MRS with high yield.

18

CUSP provides us with ultimate cleanliness of ISO class -1,
which is four orders of magnitude better than that in super cleanroom.

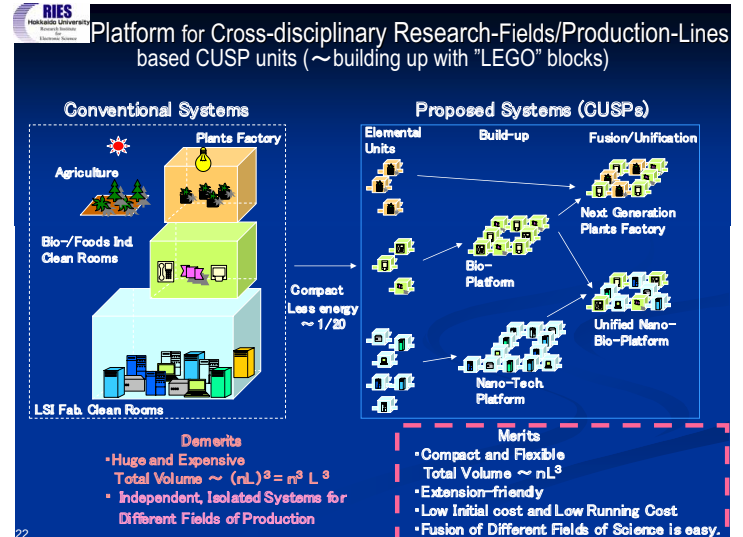

CUSP to enable us to make DUUC, Q-Cross, and Eg-MRS with high yield.

CUSP outperforms even super cleanrooms!

Microbes and their sizes

Summary

"TD U BU" as Generating function...
